

# SOP: Create Blog Article Images and Social Share Assets

## Objective

Create a consistent set of images for each completed blog article, including the feature image, desktop banner, mobile banner, article section images, FAQ images, and Google My Business share images. This SOP ensures all assets follow the same naming, sizing, font, and overlay rules so they are easy to identify and publish correctly.

## Key Steps

### 1. Review the required image set for a completed blog article 0:00

- Confirm the full asset list needed for each blog article:
  - Feature image
  - Desktop banner image
  - Mobile banner image
  - Large article images for each H2 section
  - FAQ image(s)
  - Google My Business share images

- Use the completed article example as the reference for what the final output should look like.
- Make sure every image matches the article content and section titles.

## 2. Create the feature image using the correct canvas and text rules 1:04

- Build the feature image first, since it becomes the base for other banner assets.
- Use a canvas size of **700 x 450 px**.
- Include both:
  - The **theme** of the article
  - The **title** of the article
- Use **Open Sans** at **15 px**.
- Apply either:
  - A slight glow effect at about **50 intensity**, or
  - A drop shadow
- Use the provided overlay for the correct title length:
  - Two-line title overlay
  - Three-line title overlay
- Keep the canvas size consistent every time.

## 3. Build the desktop banner image from the feature image 3:12

- Create the desktop banner using the same background image used for the feature image.
- Use the desktop banner overlay provided.
- Set the canvas size to **1286 x 300 px**.
- Name the file using this rule:
  - **banner-title of article**
- Keep the gradient overlay in place so the banner remains readable.
- Ensure the banner matches the article title and overall theme.

#### 4. Build the mobile banner image from the feature image [3:58](#)

- Create the mobile banner using the same background image used for the feature image.
- Use the mobile overlay provided.
- Set the canvas size to **400 x 600 px**.
- Name the file using this rule:
  - **mobile-title of article**
- Keep the gray overlay visible so the subject remains clear.
- Make sure the mobile version is visually aligned with the desktop banner and feature image.

## 5. Create large article images for each H2 section [5:29](#)

- For each H2 title in the article, create a matching image.
- Start by selecting an appropriate image:
  - Generated image, or
  - Stock image
- Place the H2 title on top of the image.
- Use the provided gray overlay so the subject remains visible behind the text.
- Make sure the subject is centered or properly aligned in the frame.
- If the crop looks awkward, adjust the crop until the subject is positioned correctly.
- Name each file using the article title and the matching H2 title.
- Keep the image aligned with the section it represents.

## 6. Apply text placement and styling rules for article images 7:31

- Use **Archivo Black** for the large article image text.
- Keep the font size around **48px** and round up as needed.
- Align text either:
  - Centered, or
  - Left-aligned
  - Right-aligned
- Choose the alignment based on the image composition.
- Add text only when it improves the image.
- If the image is strong enough on its own, leave it without text.
- Do not let text cover the main subject or reduce readability.

## 7. Follow the special rule for the closing/advice image 8:55

- For the bottom-line or advice section image, do **not** add text over the image.
- Use an expressive or relevant image that stands on its own.
- Keep this rule consistent every time.
- The image should communicate the section without needing a title overlay.

8. Use the correct FAQ image based on the article topic [9:26](#)

- Always use one of the approved FAQ images.
- Do not create a new FAQ image unless instructed.
- Choose the FAQ image based on the topic:
  - Use the prediction-related FAQ image for prediction topics
  - Use the timing-related FAQ image for timing topics
- Replace the title text as needed while keeping the approved image structure.
- Maintain the same naming convention for FAQ assets.

## 9. Create Google My Business share images with the correct dimensions and layout 11:30

- Build the Google My Business share images at **1200 x 900 px**.
- Create one version for each location:
  - Toronto
  - Ottawa
  - Richmond Hill
  - Mississauga
- Use the format:
  - **City name - Article title**
- Keep **Toronto News** unchanged where required.
- Use the same feature image background used for the blog article.
- Ensure the layout stays within the approved visual boundaries.

**10. Apply all naming, sizing, and consistency rules before saving 14:30**

- Confirm the article title is always based on the **H1 title**.
- Use the correct overlay for the title length.
- Keep the image heights and canvas sizes unchanged.
- Maintain consistency:
  - Naming conventions
  - Font types
  - Font sizes
  - Drop shadow or glow effects
  - Overlay usage
- Save all assets in the completed blog article folder for reference and reuse.

## Cautionary Notes

- Do not change the required canvas sizes for any image type.
- Do not let article text overlap the main subject in a way that hurts readability.
- Do not pass the logo boundary line in the GMB share images.
- Do not create new FAQ images when approved versions already exist.
- Keep naming exact and consistent; incorrect naming can break organization and publishing workflows.
- Use the correct overlay for two-line vs. three-line titles.
- Keep the drop shadow/glow treatment consistent across all assets.

## Tips for Efficiency

- Reuse the feature image background to speed up banner and GMB image creation.
- Keep approved overlays and rule images in a dedicated reference folder.
- Batch-create all H2 section images after the article structure is finalized.
- Use the same font settings and shadow settings as defaults to reduce rework.
- Check crop alignment before finalizing each image to avoid repeated edits.
- Save completed examples as templates for future articles.
